

Business Continuity Plan (BCP) - GlobalFinancial

Revision: 1.0

Effective Date: 2026-02-15

1. Incident Declaration

Authority: Crisis Management Team (CMT) Lead

Trigger: Critical service outage affecting transaction processing or customer access.

2. Recovery Procedures

Scenario A: Compute Node Failure (Windows Cluster)

Symptoms: File Shares inaccessible, Cluster GUI shows SRV02 down/offline.

Procedure:

Verify Node Status:

- Attempt to Ping SRV02.
- Check Hyper-V/iDRAC Console for "Powered Off" state.

Safety Shutdown (Fencing):

- If the node is unresponsive but not fully dead, ensure it is forcefully shut down to prevent data corruption.

Failover Validation:

- Log in to the surviving node (SRV01).
- Open **Failover Cluster Manager**.
- Verify that roles (GF-FS / GF-Cluster) have moved to the surviving node.
- **Action:** If Status is "Pending" or "Failed", right-click the Role -> **Move** -> **Select Node** -> SRV01.

Client Verification:

- Ensure mapped drives are accessible from Client VMs.

Scenario B: Load Balancer Failure (Linux Edge)

Symptoms: Webservice URL is inaccessible; timeout on public IP.

Procedure:

Verify LB Status:

- SSH to LIN4 (Load Balancer).
- Check service status: `sudo systemctl status haproxy`.

Service Recovery:

- Attempt restart: `sudo systemctl restart haproxy`.
- Verify status is "Active (running)".

Bypass/Redundancy (If restart fails):

- *Emergency Measure:* Update DNS records to point directly to LIN1 or LIN2.
- *Alternative:* Redeploy HAProxy config to a standby node (e.g., LIN3) if architecture permits.

Verification:

- Refresh the web application URL.
- Verify traffic distribution in logs if possible.

3. Communication Plan

- **Notify Stakeholders:** Send "Code Red" email to IT Management.
- **Update Status Page:** "Investigating Issues" -> "Recovery in Progress" -> "Operational".

4. Post-Incident Review

- Collect logs (`/var/log/syslog`, `haproxy.log`, Windows System Events).
- Calculate Total Downtime and compare against RTO.
- Update BCP with lessons learned from the incident.
